Show and Tell: Skill Acquisition

Adam Johnson - me@adamj.eu

28th August 2013

The Skill

- Something you did today
- You've been paid to do it
- You've probably never *really* practiced it in your life...

Typing!

(not me)

Motivation

- I'm a programmer - I have a lot of typing to do!
- Fear of RSI - colleagues have been crippled by it
- Stat: "In the USA, carpal tunnel syndrome results in an average of $30,000 in lifetime costs" (Wikipedia)

To business!

- Just need to grab some typing programs
- Get down to learning QWERTY the *right* way!!

Ten Thumbs

Finger Placement
You type this key with the first (index) finger of your right hand.

Under-motivation

- Didn't know how long it would take
- Why was I doing this again?
- Hard practicing QWERTY *the right way* at night, then going back to old habits during the day

...what changed?

The First 20 Hours

- Josh Kaufman, 2013

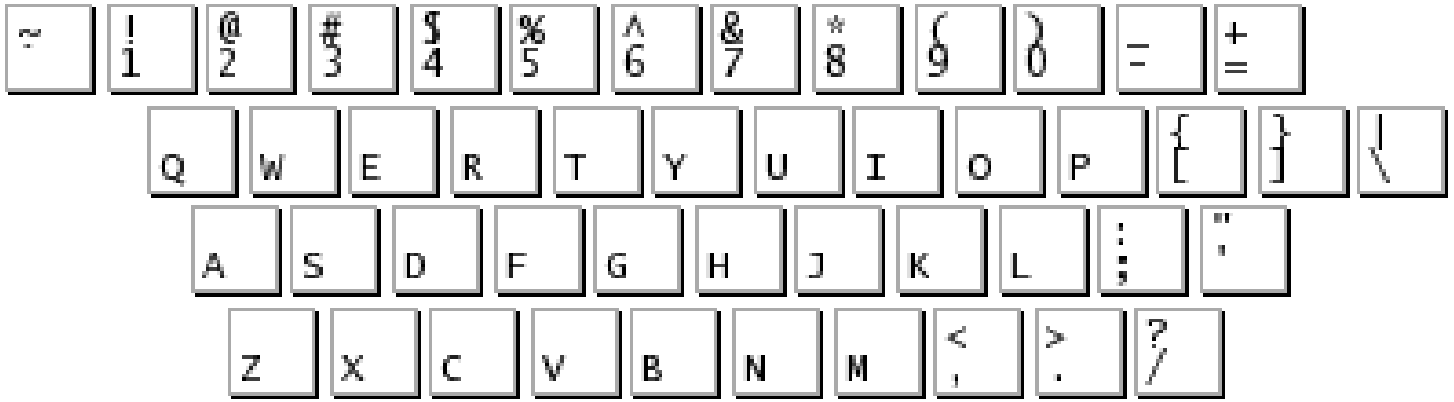
- `http://first20hours.com/`

The First 20 Hours : Rapid Summary

- Nearly any skill can be learnt (to a useful degree) in 20 hours
- A couple chapters of general how-to, then one chapter on each of six skills he learnt with his method
- One of these was on touchtyping... in 'Colemak'

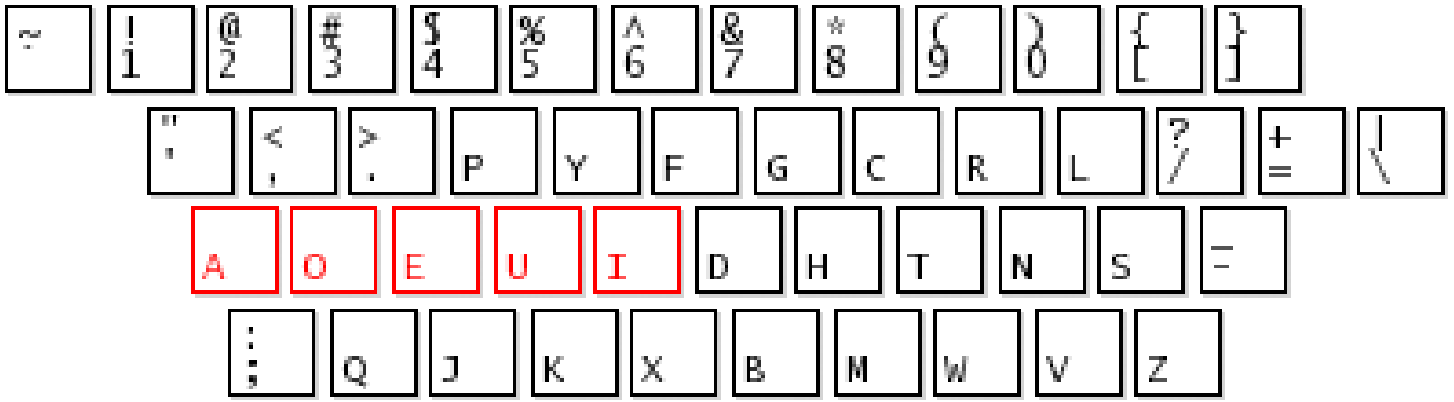
A brief history of keyboard design...

QWERTY



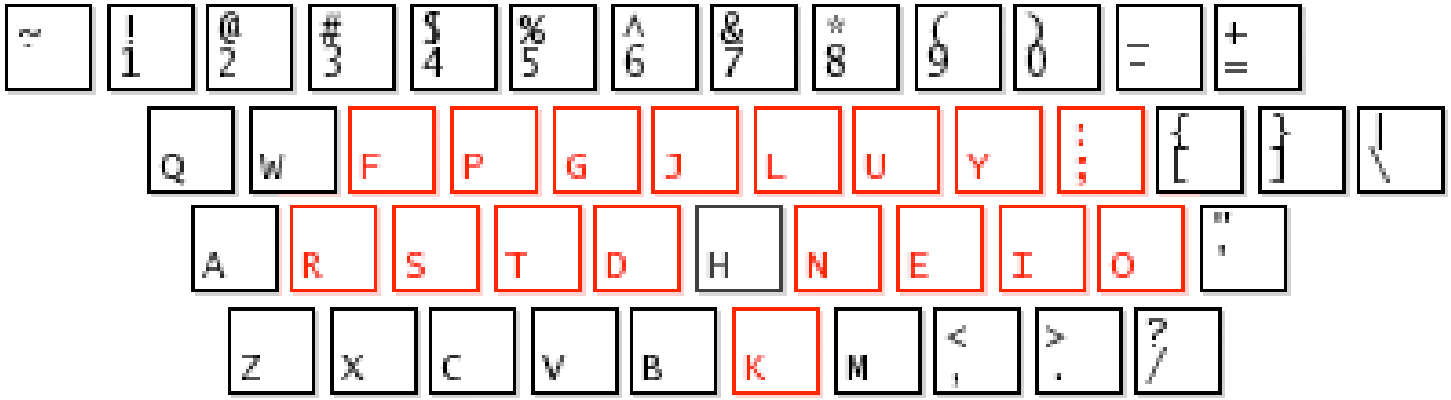
- "Slowly took over the world", since 1872. Main design constraint: to stop typewriter key bars jamming.

DVORAK

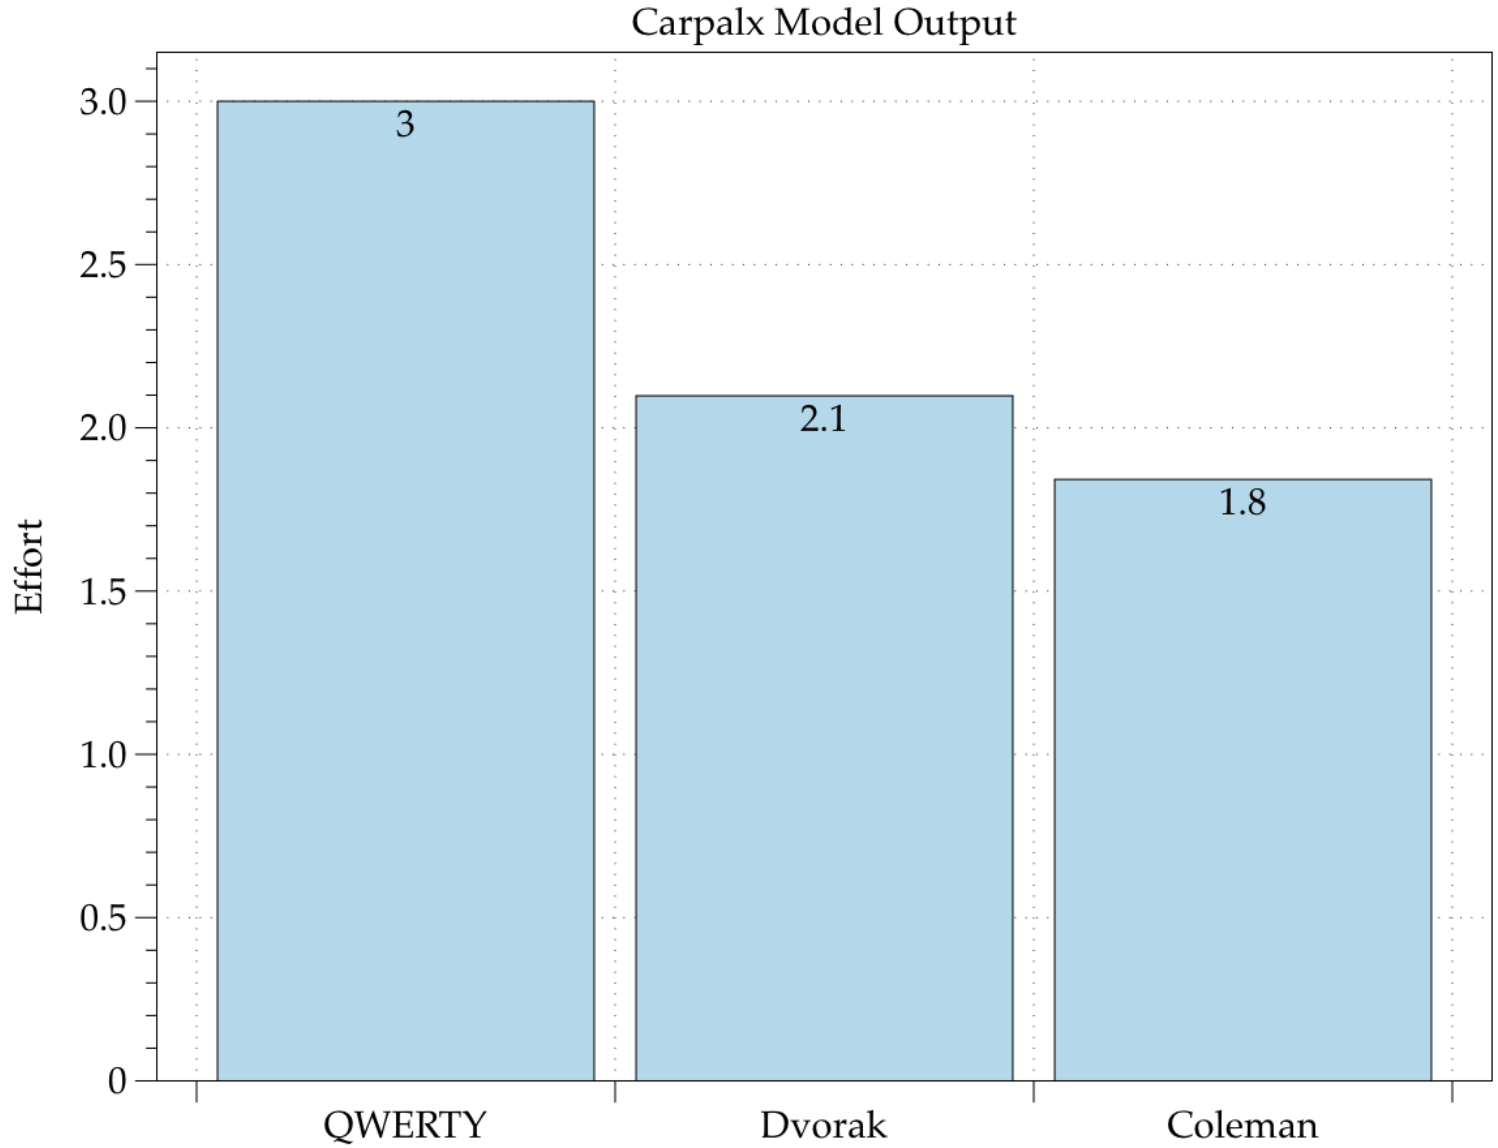


- 1932 attempt at optimisation. Relatively hard to learn.

Colemak



- Designed by a programmer with mathematical models. Split between ease of transition (Q,W,Z,X,C,V stay the same) and optimization.



- Source: `http://mkweb.bcgsc.ca/carpalx/?colemak`

Method

- Swap keys on OS and keyboard
- Get some training programs
- Fire away

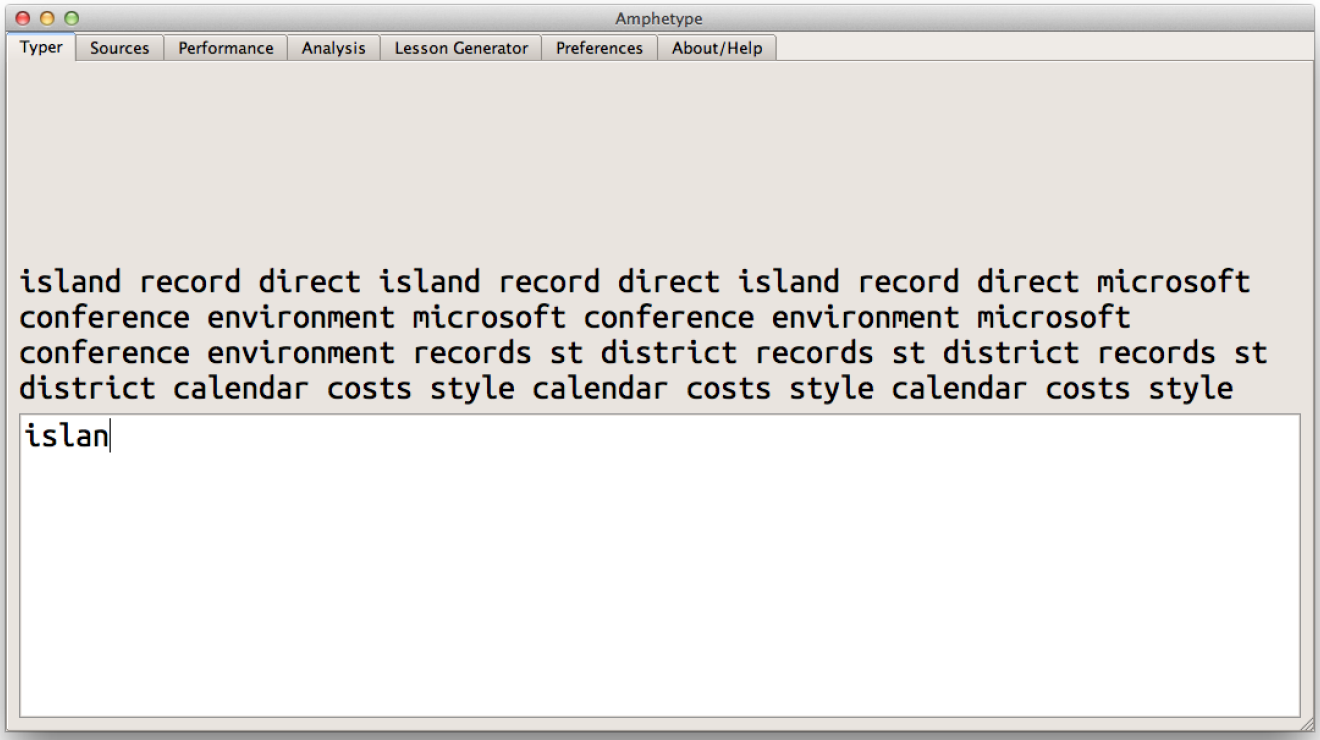
Method

- Swap keys on OS and keyboard
- Get some training programs
- Try to practice in 20 minute + sessions, before bed.

Programs

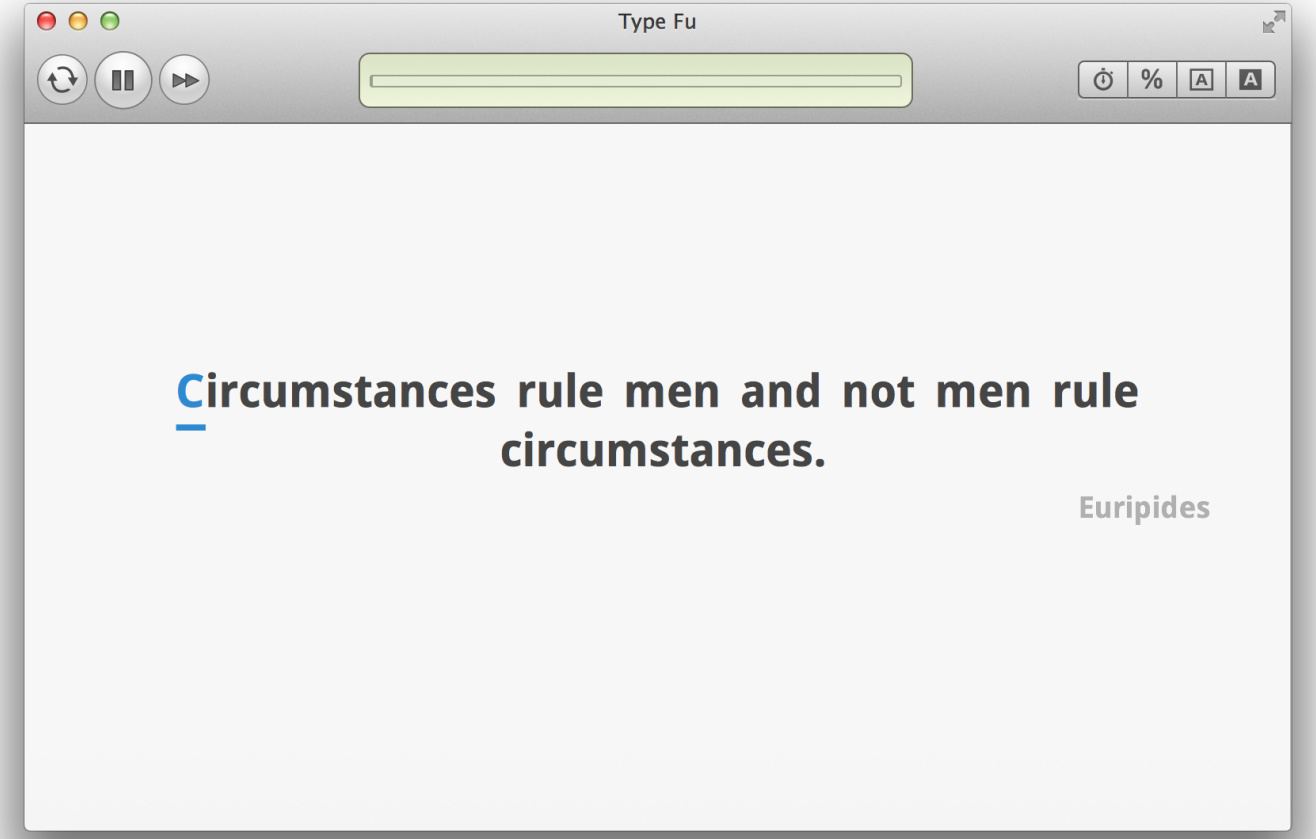
- A good mix of programs is useful
- Practice different subskills - hardest keys, whole prose, etc.
- Data export - not much of a feature. Many record your WPM + accuracy, but often only for own graph featux''re.

Amphetype



- Free & open source - `https://code.google.com/p/amphetype/`

Type-Fu



- 6.99 - `http://type-fu.com/`

Typocalypse 3D

- Free - `http://is.gd/typeocalypse`

Final Statistics

- Total time spent practicing typing: **20:06**
- Moving Average WPM in Amphetype: **52 WPM**
- Time spent preparing this talk: **3:54**
